

Elevate your school's communication and safety protocols with G2 Communicator.

Why Choose G2 Communicator?

User-Friendly:

Our easy-to-navigate interface requires no steep learning curve. But if you ever need help, our online guide is just a click away.

Flexible Deployment:

Choose from cloud, local server, or virtual machine options to match your institution's specific requirements.

Future-Ready:

Designed to evolve with your needs, our system is ready to adopt new integrations as they become available.

Community-Centric:

Designed with feedback from educators, G2 Communicator reflects the needs and challenges of modern schools.

Step into a new era of school communication and safety with G2 Communicator, a robust web-based user interface designed for the unique needs of K-12 educational institutions.

One Platform - Multiple Solutions

Simplified Scheduling

Manage the cadence of your school day effortlessly. Easily set up complex bell schedules and make real-time adjustments for unforeseen events like snow days, all from our user-friendly interface.

Zones: Tailored Messaging

With G2 Communicator, you can group devices into zones for easier administration. Whether it's a specific building wing, grade-level classrooms, or outdoor areas, zones simplify the deployment of bells, announcements, and emergency alerts.

Alerts and Announcements

Take your alerts and announcements to the next level with our sequenced, multi-step interface. Go beyond basic notifications by playing different audio files to distinct zones, initiating visuals on designated devices, or setting up pauses—all in a single, easy to understand, automated sequence.

Intuitive Dashboard Widgets

From initiating announcements to device statuses, our homepage widgets are designed for quick and easy access to your most-used features, helping administrators make effective decisions swiftly.

Cross-Compatibility

Our platform's open architecture supports a wide range of SIP-enabled IP devices, freeing you from hardware limitations and paving the way for future integrations.

Comprehensive Safety

With G2 Secure, leverage our emergency chat feature—currently on iPhone and soon on Android—for instant communication in critical situations. Easily configured panic buttons allow for quick localized or building-wide alerts.

Flexible Deployment Options

Choose from cloud, on-premises, or virtual machine deployment to tailor the system to your school's specific needs.
